DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claims 10-30 are objected to because of the following informalities:

Claims 10 & 20: "compactdisk" should be --compact disk--.

Claim 11, line 14: "when the analog" should be --wherein when the analog--.

Claim 21, line 15: "when the analog" should be --wherein when the analog--.

Claims 12-20 & 22-30 are dependent upon objected base claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 3, 4, 13, 14, 23 & 24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3, 13 & 23 recite the limitation "generating the reference function" on the preamble. There is insufficient antecedent basis for this limitation in the claims.

Claims 4, 14 & 24 are dependent upon rejected base claims.

Citation of Relevant Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure of adjusting laser power by using a difference amount between a watching signal and a reference voltage in an optical disk drive.

Allowable Subject Matter

6. Claims 1, 2, 5-12, 15-22 & 25-30 are allowed over the prior art of record.

7. Claims 3, 4, 13, 14, 23 & 24 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

8. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record alone or in combination fails to teach or suggest:

In claims 1, 11 & 21, generating a first function according to a relationship between control signals transmitted from a microprocessor to an analog front end circuit and a difference amount between watching signals and a reference voltage; wherein when the analog front end circuit adjusts the writing voltage according to the first function and a reference function so as to adjust the magnitude of laser beams emitted by an optical pick-up unit.

Claims 2-10, 12-20 & 22-30 are dependent upon base claims having allowable subject matter.
